123SEED.com - 53 Chemin de Belande - 59310 COUTICHES

FRANCE - Service Client : 123seed@123seed.com

Species: Tomato

Latin name: *Lycopersicon Lycopersicum* (L.) Karsten
Ex.Farw.

Inscription in the European catalog under: Rio Grande

Other usual name:-

Variety: Rio Grande

Family: Solanaceous

Origin: Peru

The Tomato Rio Grande is a variety of tomato resistant to diseases (VFF) producing large, meaty, pear shaped, red fruits, excellent for sauces, purées and juicing. Plant adapted very well to extreme temperatures. Harvest possible in 80 days.

Seed sowing: From February to May

Collect tomatos: From May to September

Height: The tomato reaches on average 1 meter

Exposure: Sunny

Sowing instructions: Seed sowing in pots under frame or in heated greenhouse, put in place after any danger of frosts is drawn aside and that the plants make from 12 to 15 cm in height, think of propping them and to grip the greedy ones, take care not to sprinkle the leave, this will support the development of diseases.

Advised Sowing distance: 50 cm by 70 cm

Minimum seed sowing temperature: 18 °C

Seed germination: 7 to 14 days
